## MICROSUN

### Table and Floor lamps

Home lighting so different it will make you feel different. Metal Halide lighting technology delivers light which simulates the natural feel of the sun itself.

Microsun portable table and floor lamps utilize a gearpack which uses this technology to deliver incredible amounts of light into your home.

#### **Technology... inspired by the sun itself**

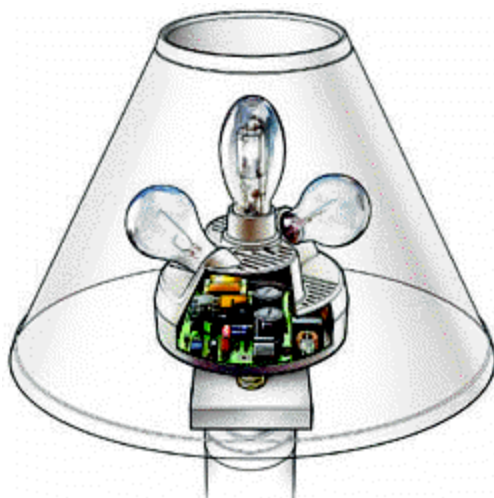

From the moment you turn on your Microsun lamp, you know you are in for a unique experience. Unlike other artificial lighting, the Microsun Metal Halide Light Source reaches full illumination gradually—like the sun itself.

Your Microsun Lamp comes complete with a Microsun Light bulb (center of the illustration) and two incandescent light bulbs (sides).

Separate switches allow you to operate the lamp using just the incandescent bulbs, or at full illumination for bright white light.

The Microsun Light bulb produces more light than a 300-watt halogen bulb, yet consumes only 68 watts. It not only generates less heat, it is more economical to operate.

You'll also notice that the color-balanced light produced by the Microsun Light Source is closer to that produced by the sun itself. Which means it is the perfect light for reading or detailed craft work. All in all, Microsun lamps accessorize your home, office or rooms with the finest quality light available today.

Because of the many styles available please visit the Microsun Home page, [www.microsun.com](http://www.microsun.com), to review the style that would fit your needs. For additional information and availability via the DLA supply system contact the
